# 1. Getting Started & Login

Bean Brewyage is a web-based point-of-sale system for a café. It runs in any modern browser (Chrome or Edge recommended — Chrome/Edge is required for the receipt printer).

1. Open the application URL in your browser.
2. Enter your **Username** and **Password**.
3. Click **Sign In**. You are taken to your default screen (Dashboard for admins, the Orders screen for kitchen staff).

**Note:** Sessions require re-login after closing the browser. Logging out requires confirmation (you must enter your PIN again on next login).

## Default accounts

| Username | Password | Role          |
|----------|----------|---------------|
| admin    | admin123 | Administrator |
| cashier1 | 1234     | Cashier       |
| kds1     | kds123   | Kitchen Staff |

**Security:** Change these default passwords after setup (see Section 11).

## 2. User Roles & Access

---

The system has three roles. Each role only sees the screens it is allowed to use.

| Role                    | Access                   | Description                                                                                            |
|-------------------------|--------------------------|--------------------------------------------------------------------------------------------------------|
| <b>Admin</b>            | Everything               | Full control: dashboard, POS, inventory, menu, customers, orders, sales, reports, settings.            |
| <b>Cashier</b>          | POS · Customers · Orders | Runs sales and can view customers and the kitchen screen. Cannot open dashboard, reports, or settings. |
| <b>KDS</b><br>(kitchen) | Orders only              | Sees only the Kitchen Display System. Any other page redirects back to Orders.                         |

The sidebar navigation automatically hides items the current role cannot access.

### 3. Dashboard

---

The dashboard is the administrator's home screen and shows a live summary of the business.

#### Cards

| Card              | What it shows                               |
|-------------------|---------------------------------------------|
| Today's Sales     | Total revenue for the current business day. |
| Transactions      | Number of sales recorded today.             |
| Inventory Value   | Total value of stock on hand.               |
| 7-Day Sales Trend | Line chart of the last 7 days of sales.     |
| Best Selling      | Top products by quantity sold.              |
| Stock Alerts      | List of items that are low or out of stock. |

The dashboard also shows the **Cash vs GCash** split for today's sales. Use the **View Reports** button to jump to detailed reports.

## 4. POS Terminal

---

The POS Terminal is where sales are rung up.

### Finding an item

- Type in the **Search items...** box to filter the menu.
- Click a **category** to show only items in that category.
- Click an item card to add it.

### Variants & add-ons

When an item has options, a dialog opens:

- **Variant** — choose the size/type (e.g. *12oz Iced*). The price updates automatically.
- **Add-ons** — tick any extra items (e.g. extra shot, syrup). Required add-on groups must have at least one selection.
- Click **Add to Cart** to confirm.

### Cart controls

- Use **+** / **-** to change the quantity of a line item.
- Use the trash icon to remove a line.
- **Clear Cart** empties the whole order.

### Customer (optional)

Tap + **Select Customer** to attach a customer to the sale and earn loyalty points (see Section 10).

### Checkout

1. Click **Checkout**.
2. Choose a payment method:
  - **Cash** — enter the amount tendered. Use the quick buttons ( **+P50** , **+P100** , **+P200** , **+P500** , **+P1000** ) or **Round Up**. Change is calculated automatically.
  - **GCash** — enter the GCash **Reference #**. The sale cannot be completed without a reference.
3. Click **Complete Sale**, then confirm.
4. A receipt is shown (and sent to the printer if one is paired).

**Note: Complete Sale** stays disabled until the amount tendered covers the total (cash) or a reference is entered (GCash).

## 5. Kitchen Display System (Orders)

---

The Kitchen Display System (KDS) shows live orders for kitchen staff. It refreshes automatically.

### Order states

| Column           | Status           | Action button          |
|------------------|------------------|------------------------|
| New Orders       | <b>new</b>       | <b>Start Preparing</b> |
| Preparing Orders | <b>preparing</b> | <b>Mark Ready</b>      |
| Ready Orders     | <b>ready</b>     | <b>Complete</b>        |

Each order card shows the **order number**, an elapsed timer since it was placed, the items and any add-ons, and the action button.

1. Tap **Start Preparing** when the kitchen begins the order.
2. Tap **Mark Ready** when the order is done.
3. Tap **Complete** when the customer receives it.

Completed orders move out of the active columns. A yellow banner appears when new orders are waiting.

## 6. Sales History

The Sales screen lists every transaction with its status and payment details.

| Column      | Description                                                     |
|-------------|-----------------------------------------------------------------|
| Order #     | Unique order number (format <code>ORD-YYYYMMDD-NNNNNN</code> ). |
| Date & Time | When the sale was made.                                         |
| Items       | Number of line items.                                           |
| Total       | Grand total paid.                                               |
| Payment     | Cash or GCash.                                                  |

### Actions

- **View** — open the full receipt.
- **Void** — cancel the sale (allowed only while it is *new* or *preparing*). Requires a reason.
- **Refund** — refund the sale (allowed unless it is already refunded). Requires a reason.

**Note:** Voiding or refunding a sale restores any stock that was deducted from inventory.

# 7. Reports

---

The Reports screen (admin only) has five tabs, each with its own summary and a **CSV** export button for spreadsheets.

| Tab             | Shows                                        |
|-----------------|----------------------------------------------|
| Sales           | Total sales, orders list, payment split.     |
| Expenses        | Total expenses and breakdown by category.    |
| Inventory Usage | Ingredient consumption and stock movement.   |
| Voids/Refunds   | Voided and refunded orders with reasons.     |
| Customers       | Top customers by spend and loyalty activity. |

Click **CSV** on any tab to download that report as a spreadsheet file.

## 8. Inventory

---

The Inventory screen tracks ingredients and stock levels.

### Viewing stock

- Use the search box to find an ingredient.
- Filter by **All Items**, **Low Stock**, or **Out of Stock**.
- The table shows quantity on hand, unit, unit cost, reorder level, and total value.

### Adding an ingredient

1. Click **New Ingredient**.
2. Enter the **name**, **unit** (g, ml, pcs, etc.), and **reorder level**.
3. Click **Create**.

### Adjusting stock

1. Click **Adjust** on an ingredient row.
2. Enter a **Delta (+/-)** and a **Reason**.
3. Click **Apply**. Stock is updated and a movement is logged.

### Movement Log & Daily Usage

Switch tabs between **Stock**, **Movement Log** (every change to stock), and **Daily Usage** (consumption per day).

## 9. Menu Management

---

The Menu screen manages products, variants, add-ons, and recipes.

### Creating / editing an item

1. Click **New Item** (or **Edit** on an existing card).
2. Fill in the **name**, **category**, **price**, and **loyalty points earned**.
3. Optional: upload an image.
4. Tick **Send to KDS** if the item should appear in the kitchen display.
5. Tick **Active** to make it available at the POS.
6. Click **Create** / **Save**.

### Recipe & Options dialog

Click **Recipe** on a card to manage:

- **Variants** — sizes/types. Each variant can *Override* the base price or *Adjust* by a fixed amount.
- **Add-on Groups** — groups of extras (required or optional).
- **Recipe** — ingredients consumed per item, variant, or add-on (used for stock deduction).

### Deactivate / Reactivate

Use the trash icon to **deactivate** an item (hides it from the POS). Use **Show Inactive** to see deactivated items and **Reactivate** them.

## 10. Customers & Loyalty

---

The Customers screen tracks customer profiles and loyalty points.

- Click **New Customer**, enter the **name** and optional **mobile number** / **email**, then **Create**.
- Each customer gets a **member number** automatically.
- Use the search box to find a customer.

When a customer is attached to a sale at the POS, they earn loyalty points based on the items purchased. The receipt shows the points earned.

# 11. Settings & Receipt Printer

---

The Settings screen (admin only) configures the store and the hardware.

## Store Information

Business name, phone, address — shown on receipts.

## Business Settings

- **Currency** and **Timezone** (default: PHP, Asia/Manila).
- **Tax rate** applied to sales.
- **Low-stock behavior** — warn or block sales when an ingredient is out of stock.

## Bluetooth Printer & Cash Drawer

Receipts print over Web Bluetooth (Chrome/Edge only). The cash drawer opens through the printer's RJ12 port or a USB drawer.

- **Pair Printer** — connect a thermal receipt printer.
- **Test Print** — print a test receipt.
- **Test Drawer** — open the cash drawer.

Click **Save Settings** to store all changes.

**Note:** "Not paired" is shown until a printer has been connected. Only Chrome/Edge support the printer — this is a browser limitation.

## 12. Receipts & Printing

---

Every sale produces a receipt showing:

- Business name, date & time, and **order number**.
- Items with quantities, variants, and add-ons.
- Subtotal, tax, payment method, amount tendered, and change.
- Loyalty points earned (if a customer was attached).

If a printer is paired, the receipt prints automatically on checkout. You can also re-print from the **Sales** screen using the receipt view.

# 13. Troubleshooting

---

## Can't sign in

- Check the username and password are correct.
- Make sure the browser session has not expired — refresh and sign in again.

## Receipt printer not working

- Confirm you are using **Chrome or Edge** (Web Bluetooth is required).
- Re-pair the printer from **Settings** → **Pair Printer**.
- Run **Test Print** to verify the connection.

## Item won't add to the cart

- Check the item is **Active** in Menu Management.
- Check stock — an out-of-stock item may be blocked (depending on the low-stock setting).

## Order missing from the kitchen screen

- Confirm the item has **Send to KDS** enabled.
- Refresh the Orders screen — it polls for updates automatically.

Bean Brewyage — User Manual v1.0. For questions, contact your system administrator.
